NORTH-HOLLAND

SUBJECT INDEX OF VOLUME 69*

Boundary element methods

An energy appproach to the boundary element method, C. Polizzotto (2) 167–184
Trefftz method: elastic and elastoplastic problems, A.P. Zieliński (2) 185–204
Non-uniqueness in the integral equation formulation of the biharmonic equation in multiply connected domains, A.K. Mitra and S. Das (2) 205–214
An energy approach to the boundary element method, C. Polizzotto (3) 263–276

Coupled problems

Finite element simulation of buoyancy-driven flows with emphasis on natural convection in a horizontal circular cylinder, J.C. Heinrich and C.C. Yu (1) 1–27
Numerical simulations of thermosolutal instability during directional solidification of a binary alloy, J.C. Heinrich (1) 65–88
A spectral problem arising in fluid-solid structures, C. Conca and M. Vanninathan (2) 215–242

Dynamics

Multi-step numerical integrators for time-dependent vibrating systems, X.-C. Gao and Q.-X. Zhang (1) 45–52
A spectral problem arising in fluid-solid structures, C. Conca and M. Vanninathan (2) 215–242

Elasticity

Shape optimal design of elastic bodies using a mixed variational formulation, H.C. Rodrigues (1) 29–44
A note on elastic energy density functions for largely deformed compressible rubber solids, I. Fried and A.R. Johnson (1) 53–64
Initial-value analysis of continuous orthotropic plates, H. Al-Khaiat (2) 153–165
An energy approach to the boundary element method, C. Polizzotto (2) 167–184
Trefftz method: elastic and elastoplastic problems, A.P. Zieliński (2) 185–204
Remarks on the Gaussian quadrature rule for finite-part integrals with a second-order singularity, N.I. Ioakimidis and M.S. Pitta (3) 325–343
Quadrature matrices and elastica problems, I. Somervaille (3) 345–354

* The issue number is given in front of the page numbers.

Finite difference methods

A Taylor-series approach to numerical accuracy and a third-order scheme for strong convective flows, D. Bradley, M. Missaghi and S.B. Chin (2) 133–151
Initial-value analysis of continuous orthotropic plates, H. Al-Khaiat (2) 153–165

Finite element and matrix methods

Finite element simulation of buoyancy-driven flows with emphasis on natural convection in a horizontal circular cylinder, J.C. Heinrich and C.C. Yu (1) 1–27
Numerical simulations of thermosolutal instability during directional solidification of a binary alloy, J.C. Heinrich (1) 65–88
Two classes of mixed finite element methods, L.P. Franca and T.J.R. Hughes (1) 89–129
Viscous flow with large free surface motion, A. Huerta and W.K. Liu (3) 277–324

Fluid mechanics

Finite element simulation of buoyancy-driven flows with emphasis on natural convection in a horizontal circular cylinder, J.C. Heinrich and C.C. Yu (1) 1–27
A Taylor-series approach to numerical accuracy and a third-order scheme for strong convective flows, D. Bradley, M. Missaghi and S.B. Chin (2) 133–151
A spectral problem arising in fluid-solid structures, C. Conca and M. Vanninathan (2) 215–242
Comparison of the single-phase and two-phase numerical model formulation for saturated-unsaturated groundwater flow, P.A. Forsyth (2) 243–259
Viscous flow with large free surface motion, A. Huerta and W.K. Liu (3) 277–324

General Rayleigh–Ritz and Galerkin techniques

Trefftz method: elastic and elasto-plastic problems, A.P. Zieliński (2) 185–204

Heat and diffusion

Comparison of the single-phase and two-phase numerical model formulation for saturated-unsaturated groundwater flow, P.A. Forsyth (2) 243–259

Incompressible and near incompressible media

Finite element simulation of buoyancy-driven flows with emphasis on natural convection in a horizontal circular cylinder, J.C. Heinrich and C.C. Yu (1) 1–27
A note on elastic energy density functions for largely deformed compressible rubber solids, I. Fried and A.R. Johnson (1) 53–64
Two classes of mixed finite element methods, L.P. Franca and T.J.R. Hughes (1) 89–129

Miscellaneous topics

Remarks on the Gaussian quadrature rule for finite-part integrals with a second-order singularity, N.I. Ioakimidis and M.S. Pitta (3) 325 – 343

Nonlinear mechanics

A note on elastic energy density functions for largely deformed compressible rubber solids, I. Fried and A.R. Johnson (1) 53 – 64

Numerical solution procedures

Multi-step numerical integrators for time-dependent vibrating systems, X.-C. Gao and Q.-X. Zhang (1) 45 – 52
Two classes of mixed finite element methods, L.P. Franca and T.J.R. Hughes (1) 89 – 129
Nonuniqueness in the integral equation formulation of the biharmonic equation in multiply connected domains, A.K. Mitra and S. Das (2) 205 – 214
Quadrature matrices and elastica problems, I. Somervaille (3) 345 – 354

Optimization

Shape optimal design of elastic bodies using a mixed variational formulation, H.C. Rodrigues (1) 29 – 44

Optimization and design of structures

Shape optimal design of elastic bodies using a mixed variational formulation, H.C. Rodrigues (1) 29 – 44

Phase changes

Numerical simulations of thermosolutal instability during directional solidification of a binary alloy, J.C. Heinrich (1) 65 – 88

Plasticity

Trefftz method: elastic and elasto-plastic problems, A.P. Zieliński (2) 185 – 204
An energy approach to the boundary element method, C. Polizzotto (3) 263 – 276

Shells and plates

Initial-value analysis of continuous orthotropic plates, H. Al-Khaiat (2) 153 – 165

Stability in fluid mechanics

Numerical simulations of thermosolutal instability during directional solidification of a binary alloy, J.C. Heinrich (1) 65 – 88

Structural mechanics

Initial-value analysis of continuous orthotropic plates, H. Al-Khaiat (2) 153 – 165
A spectral problem arising in fluid-solid structures, C. Conca and M. Vanninathan (2) 215 – 242
Quadrature matrices and elastica problems, I. Somervaille (3) 345 – 354

Thermal effects and thermodynamics

Finite element simulation of buoyancy-driven flows with emphasis on natural convection in a horizontal circular cylinder, J.C. Heinrich and C.C. Yu (1) 1 – 27

Transport phenomena

Comparison of the single-phase and two-phase numerical model formulation for saturated-unsaturated groundwater flow, P.A. Forsyth (2) 243 – 259

Viscous flow

Finite element simulation of buoyancy-driven flows with emphasis on natural convection in a horizontal circular cylinder, J.C. Heinrich and C.C. Yu (1) 1 – 27
Numerical simulations of thermosolutal instability during directional solidification of a binary alloy, J.C. Heinrich (1) 65 – 88
Viscous flow with large free surface motion, A. Huerta and W.K. Liu (3) 277 – 324
